Environmental chemicals were used extensively during the second half of the 20th century and their influence on human health has been the subject of extensive research. These chemicals may be applied directly to crops, either before planting or as herbicides, or they may be sprayed on soil or sprayed on the leaves of crops. In some cases, large amounts of a chemical may be sprayed to treat a field for a short time. The use of pesticides and fungicides has been decreasing since approximately 1980 in an effort to reduce the environmental impact of pesticides. The use of chemicals for protection of crops against plant diseases and pests is a mainstay of conventional crop production, but such chemicals are not normally applied in organic farming systems. This article summarizes some literature that has been published in the last 15 years about the effects of fungicides on crop yields in organic and conventional systems.Q: Can we view Sitemap in Google Webmaster tool I am using google webmaster tools, Now can we view sitemap with XML file. Is this possible. I am using following link. A: No, that page is outdated. All that page provides is a list of pages that are associated with a given sitemap. See (and save) this article to view a sitemap. Chicago's lone public park surrounded by the city's poorest neighborhoods is both a reflection of its past and its present. Created out of a World War I veterans' relief fund in 1916, Michigan Avenue Beach was one of a string of lakeside parks, like the popular Lincoln Park Beach and Paddleboat Beach, that brought a place for whites and blacks to enjoy the Lake Michigan shoreline. But just 10 years after Michigan Avenue Beach opened, violent race riots broke out in the city. And the racialized division that resulted from the violence only intensified as it spread throughout the rest of the country. Nearly 100 years later, the state of race relations in 2d92ce491b
