For one of my fields (the last field on the page) I want to have a checkbox to select a value from a list of choices on another page, and when you select that box, it populates the field with the value from the list on the other page. I need a way to get the field to load with the last selected choice on the other page, but the choices aren't available for a quick-and-dirty because the user doesn't have access to the other form. I'm pretty new to programming, and the code I've written so far works fine (albeit, it's sloppy). The first issue I ran into is that the "DoCmd.RunCommand" command that loads the form doesn't recognize that the second form is missing an object. This allows the form to load without issue, but then the object never gets populated with the value. Below is the code I am using to load the page. I need to keep it this way because I have other checkboxes on the form and they must be read to populate the value that's chosen on the other page. Private Sub Button2_Click() Dim r As Range, x As Integer Dim ID As String Dim v ID = Me.ID v = Me.IDs If Me.Controls.Count > 0 Then For x = 0 To Me.Controls.Count - 1 If TypeName(Me.Controls(x)) = "CheckBox" Then With Me.Controls(x) If.Value = True Then

The page is in 4-column design, so the menu will open in the leftmost column. It's not opening when I click, it's working properly only with mouseover. Here's the quick menu style code: /* Quick Menu */.container { margin: -4px 0 0 -35px; width: 50%; }.quick-menu { float: left; margin: 0 0 0 -35px; }.quick-menu.submenu { padding: 0; }.quick-menu ul { margin: 0; padding: 0; }.quick-menu ul li { list-style-type: none; margin: 0; padding: 0; float: left; }.quick-menu ul li ul li { list-style-type: none; display: block; }.quick-menu ul li a { color: #fff; text-decoration: none; display: block; padding: 8px 0; }.quick-menu.submenu li a { color: #000; text-decoration: none; padding: 8px 15px 2d92ce491b
