Open source AutoCAD LT is an open source software application for 2D and 3D mechanical engineering and architectural drafting. The project began in the early 1990s, when a group of teachers at the University of Melbourne wanted to share the benefits of using AutoCAD with their students. There are a number of 3D rendering programs available for AutoCAD LT. These include SketchUp, Fusion 360, Trinus and Civil 3D. attributes of a referenced table in C# code? I have two tables that I'm writing a simple 1:N relationship between (T1 and T2). T2 has a foreign key to T1. When I run a query such as: `SELECT T1.*, T2.Attribute1, T2.Attribute2 FROM T1, T2 WHERE T2.ID = @ID` I get the following results: T1ID T1Col1 T1Col2 T2ID T2Col1 T2Col2 1 1 1 1 5b5f913d15

The present invention relates to a shoe having a construction that easily allows for cleaning and maintaining. Among walking shoes, a shoe with an upper of synthetic leather is known. When cleaning, it is troublesome to wipe off soil such as mud with a rag. Further, after cleaning, the rag must be rinsed and treated with a cleaning agent. This treatment requires a lot of time and labor. In order to solve the above problem, Japanese Utility Model Laid-Open Publication No. Hei 3-4852 discloses a shoe that has a water-repellent laminate layer consisting of a rubber layer and a water-repellent layer. However, the material of the water-repellent layer consisting of a resin and a fluorine compound has a problem that the water-repellent layer peels off. Japanese Patent Laid-Open Publication No. Hei 8-142257 discloses a shoe that has a construction with a water-repellent layer consisting of a fluorine compound and a silane compound which is formed by mixing and reacting the two compounds. However, the fluorine compound that is an essential component of the fluorine compound-containing water-repellent layer in the above construction and the silane compound that is an essential component of the silane compound-containing water-repellent layer are large in molecular weight and it is difficult to uniformly disperse them in a resin. For this reason, the above water-repellent layer has a problem that the water-repellent layer peels off. Further, the fluorine compound itself is expensive, and the use of the fluorine compound causes an increase in manufacturing costs. In view of the above problem, it is an object of the present invention to provide a walking shoe that can easily be cleaned and maintained and which does not peel off.
