[Download](#)

RunWithParameters is a lightweight Windows utility whose purpose is to help you run the applications installed on your system with user-defined parameters without having to open the Command Prompt window. During the installation process you can make file associations. The tool works with EXE, BAT, CMD, COM, MSI, and SCR files, and you are allowed to add user-defined file extensions to the list. It offers support for context menu integration, so you can easily process the selected program. With a simple-right click on the desired tool, you can choose the “Run with parameters” option, and type in the command in a small window. RunWithParameters also features some preset parameters which can be selected from the drop-down menu. For example, it displays a rich-featured set of parameters for Google Chrome, such as “Allow file access,” “Always authorize plugins,” “Enable brightness control,” “Enable auto window placement,” and many others. If the preset commands do not cover your needs, you can specify a user-defined parameter. Since it doesn’t comprise any configuration settings, even rookies can master the process with just a few clicks. During our testing we have noticed that RunWithParameters carries out a task quickly, and no errors showed up throughout the entire process. As it would be expected from such a small utility, it remains light on system resources, so it doesn’t burden the overall performance of the computer, nor interfere with other programs’ functionality. To sum things up,
