2. The Paint.NET image editing program is another alternative for those who like a simple, less overwhelming approach to editing. Its tools include levels, white balance, contrast, and brightness. ## Using Filters Filters in Photoshop allow you to apply adjustments and effects to images. In Photoshop CS6, there are a number of different ways of applying filters to images. One of the most useful tools is the Lens Blur filter. It is very easy to use, and it applies a lens blur effect to images to add a highly realistic and polished look. In Photoshop CS6, you can add this effect by clicking the Filter drop-down menu, then selecting Lens Blur. Figure 1.2 shows an example of a Lens Blur filter applied to a photo. The effect is subtle but adds a very professional look to the photo and gives it a very polished look. Some of the important settings in this effect are Edge Detection (which uses the red edge-detection line as a guide for adding color) and Lens Blur (which controls how strong the blur looks). **Figure 1.2** : Using the Lens Blur filter in Photoshop CS6 Another useful filter is the Monochromatic filter. Monochromatic colors are colors that are pure with very little or no color information. Monochromatic colors tend to make photo images look very clean and professional, which is why they're so popular in the graphic arts. The Monochromatic filter can be used to bring out a photo's most dynamic features, such as the color and shape of flowers or the blue sky in the photo. The filter adds a creative and artistic look to the photo. Click on the Filter drop-down menu, and then select Monochromatic Color filter. Figure 1.3 shows an example of a Monochromatic filter applied to a photo. **Figure 1.3** : Using the Monochromatic Color filter in Photoshop CS6 To remove the filter, simply click on the Filter drop-down menu, and then select None. ## Using the Liquify Filter The Liquify filter creates some wonderful effects that can be used in advanced techniques to alter photos. The Liquify filter enables you to transform your image, change the size of portions of the image, stretch, distort, dissolve, and create interesting separations. The Liquify filter is very easy to use. It's found in the Filter drop

The N.Y. Mets agreed to a two-year deal with outfielder Michael Conforto, the team announced Wednesday. Conforto hit 20 home runs and drove in 76 runs for the Columbia Lions of the Southern Atlantic League this year. After going unselected in the 2013 draft, he was signed by the Arizona Diamondbacks and has since played for the Reno Aces and the San Francisco Giants in two seasons. The six-foot, three-inch, 195-pound Conforto possesses five-tool potential and is seen as a potential impact bat in the middle of a lineup. The Hudson Valley Sports Network's Greg Allen wrote last month that Conforto has "the natural ability to be a player we have seen on the scene for years, but it's the development of his pitch recognition and the continued refinement of his hitting that might turn a potential star into an everyday player." According to Baseball America, the organization's top priority entering the offseason was improving their offense. Mets GM Sandy Alderson will have a decision to make on whether Conforto is the right fit for his team's future. profile... Q: Sorting an Arraylist in a specified position So I'm trying to sort a list of strings based on the position of the last index inside them, but the order it outputs is completely random! Here's my code: `String h = "Hello"; String h = "Hey"; String h = "How are you"; List s = Arrays.asList(h, h, h); s.sort((String s) -> Integer.parseInt(s.substring(s.lastIndexOf(" ") + 1))); System.out.println(s);` The output is: [How are you, Hey, Hello,] A: Try `s.sort((String s) -> s.substring(s.lastIndexOf(" ")).compareTo(s.substring(s.length()-1)));` or even `s.sort((String s) -> {int index = s.lastIndexOf(" "); return index==-1?Integer.MAX_VALUE : index;});` A: Pass 2 arguments to your lambda: `s.sort(String::substring, String::compareTo);` or `s.sort((String s) -> s.substring(s.lastIndexOf(" ")));` or `s.sort((String s) -> { int index = s.lastIndexOf(" "); int returnVal = index == -1? Integer.MAX_VALUE : index; return returnVal; });` Substring is less costly than substring(length) if you already know the index you are interested in: `String s = "Hello"; System.out.println(s.substring(5));` // "e" Background {#Sec1} ===== A specific homeostatic or pathological mechanism enables the maintenance of a modulating force in the blood flow, despite small variations in the blood pressure. The physiological basis of this control is not entirely clear \[[@CR1]\]. The central role of heart rate (HR) and HR variability (HRV) in the maintenance of fluid and electrolyte homeostasis and in the regulation of blood pressure, as evidenced by the close interrelationship between these parameters
